It was August 1998; I went for a sauna bath at a popular tourist spot. After the sauna bath, at midday I was resting, all of sudden, I felt a severe pain from my ear loops stretching up to the centre portion of my head. The next day, blistering rashes emerged at the inner and outer lips of my mouth. At the same time, I was also having a severe headache and feeling as if my head was on the verge of bursting. I went to numerous clinics and hospitals to seek for treatments but to no avail. All the doctors I visited just cannot diagnose the cause of the illness that I suffered. Some of the doctors diagnose the blistering rashes as associated to singles disease symptom others diagnose the rashes symptom as due to nervous system disorder of a neuro disease. I had sought all kind of treatments and medications but none can positively cure my illness. While this was happening, I manage to get some temporary relief for the severe headache after I applied the Longevity adjustment to the affected areas. (C7, head, C5 and ear) but my headache will recur again after two hours of temporary relief. For 3 months I suffered from this illness, during this period, I felt my daily life was a living hell; living through a day is as if going through a year. Everyday I had to rely on the Longevity adjustment to get relief for my severe headache.

It was in October 1998 when I met an experienced ENT specialist Dr.Zheng. After examining my illness, I was asked to be warded to conduct a thorough check-up. He isolated and cultured the sample of the

disease to analyse the type of germ that I contracted. Finally he managed to trace out that my illness was caused by the type of bacteria called Pseudomonas aeruginosa. According to the specialist, this kind of bacteria is very life threatening and normal antibiotic drugs will not be able to kill it because this bacteria strain has developed very high immunity resistance to numerous strong antibiotic drugs. Even the poisonous drugs will not be able to kill the bacteria. It is normal for a patient infected with this kind of disease, to succumb to the disease within a week. (There was a case where a youngster fell into the drain and sustained a 5 cm cut on his leg and was infected with P. aeruginosa bacteria. Doctors had to amputate his lower limb after the 5th day and the youngster passed away on the 7th day.) The Doctors said it was a miracle that the bacteria had stayed inside my body for more than 3 months and yet I still lived to tell the tale. I attributed my miracle survival to practicing Longevity that I had learned. Due to my diligent and constant practicing of Longevity meditation and adjustment, the energy harnessed must have segregated and confined the toxicity produced by the germs and prevented it from spreading to other parts of the body. With the help of Longevity the bacteria and its toxicity was slowly excreted out from my body and I recovered fully from the illness. Lastly, I owe my life to Longevity for that I have adopted a new principle and attitude towards life and toward Longevity practices – “Not A Day For Longevity, But A Life Time For Longevity”. Finally, I am a life time Longevity Volunteer.
