Due to lack of scientific proof and recorded testimony, many of Longevity practitioners were doubtful about the effectiveness of energy healing through Longevity adjustment technique.

It was during spring season year 2005, a team of 3 Longevity teachers led by Mr. Xie Guo Tai the Deputy Administrative Executive, Ms. Li Qiu Qing and myself left for Japan to conduct a preliminary Longevity course in Tokyo. There was a dental Associate Professor (AP) by the name of Mr. Zhi Chun Ze Fu whose wife suffered stroke and was bedridden. The AP requested 3 of us go to his house to do the Longevity adjustment for his wife. Without any hesitation, Mr. Xie agreed upon to his request. On the 2nd day of the Primary stage of Longevity class; we went to the AP's house. He got ready with an apparatus called "Dark Vision Microscope" which was invented by him and his associate researcher colleagues at the university. The microscope has a special feature, just by examine a drop of blood cell, one can tell the kind of quality habitual life a person possess (e.g. type of food consumed, human social relation and mental situation). This is because the type of daily habitual life will influence the shape & behavior of the blood cell (WBC, RBC, haemoglobin & platelet) itself. For example the size of the blood cell, colour, brightness and activeness/mobility of the blood cell acts as a factor from which one can measure and determine the health condition of a person. At the scene, from the finger the AP draw a drop of blood sample (before adjustment) from Mr. Xie and his wife and carry out a preliminary test. Subsequently, after we have done the longevity adjustment another new blood sample from two of them was taken for re-examination. The results of the test obviously showed a difference between the two blood samples taken before and after the adjustment.
