

greatly reduced and he could sleep soundly. The following day, my husband and I went to the hospital to do another adjustment for him and he told us that he had confidence in Longevity because after each adjustment he could feel great improvement and recovery. After he was discharged from the hospital, our Serdang adjustment centre was given the responsibility to continue to adjust Datuk Tang in his residence. After a few adjustments when the cast was removed from his hand, we were surprised and astonished that the wound was nicely healed (a layer of young smooth reddish skin without any scar and marks/bruises at all) beyond our expectations! After the cast was removed, we had to place a clean towel over Datuk's hand and apply remote adjustments.

After another 2-3 adjustments, many parts of his hand had grown normal skin and hairs started growing too.

Coma case

Somewhere around Chinese New Year 2007, myself and some other volunteers were requested by our Setapak adjustment centre volunteers to adjust a lady who was in a coma after a tragic accident. She was warded in the intensive care unit. It was very challenging because we had to face many obstacles and constraints. She was pronounced brain dead by the doctors and she was on life support system. We adjusted her head by placing one hand on her Chakra 7 and the other hand on her medulla oblongata, heart, liver, lungs (with great emphasis), stomach and abdomen. After the second day of adjustments, the doctors had given up hope and they had removed a few of the tubes from the life support system. On the third day of adjustment we experienced a miracle on ourselves (three of us). We adjusted her for more than two hours continuously. We stood beside her by using the remote adjustment on her body. Surprisingly, we did not feel any

numbness, pain and tiredness in our hands and body. We felt that we had just do adjustments for only 20 minutes without realizing that it was more than 2 hours. The next day, the doctors were amazed at her recovery and they did another scan for her brain. Her brain readings showed remarkable recovery and she was reconnected with more life support again. Sadly, she passed away on the sixth day due to heart failure because she had lost too much blood during the accident.

Terminal case

An eight year old boy who is a terminal case patient was brought to our adjustment centre. He had undergone an operation for his hole-in-heart problem in May 2007. Unfortunately, his operation was unsuccessful and he became completely paralyzed and bedridden. He had to depend on a feeding tube. It is very pitiful to see him constantly groaning in pain, suffering from fits and seizures and unable to sleep at all. Besides adjusting him in our adjustment centre, a few of us took the initiative to adjust him daily in his house. We adjusted his Chakra 7 and 6, medulla oblongata, heart, lungs (great emphasis), all his other Chakras, liver, stomach, abdomen, hands and legs. During adjustments, he is groaning in pain and having fits and seizures continuously. Besides providing adjustments, we gave him and his family counseling and encouragement. While his mother was attending the elementary and intermediate Longevity class in Raub, we adjusted him for more than 2 hours in the morning and 4 hours at night. After the fourth week of adjustments, there were great improvements in his overall condition. His yelling and groaning in pain was greatly reduced, he looked healthier, more alert and peaceful, was able to sleep for short periods and his fits greatly reduced. Despite of his improvements, he passed away peacefully after more than a month of adjustments.
