

needed to use the walking aid just able to walk a short distance, after the adjustments, he is able to walk unaided. Also found a job and started to work, and able to ride motor-cycle to and fro for 7 to 8 kilometres journey, although feeling a bit numbness and aches, but no feelings of pain.

Mother is 83 years old, with a few common old people's problems; blood pressure slightly high, blood sugar above normal range, 3 years ago was hit by a drunken driver and injured the spinal area, made her unable to walk properly. My wife has problem with the heart, outer layer membrane blood vessel bended causing blockage of 90%, blood flow restricted, leading to upper arm, shoulder blade with aches and pains, as well as numbness, with adjustments applied, it improved a lot. Mother's blood pressure has come down, blood sugar also normal, is able to walk some distance, doing exercises. My wife's aches and pains have gone, only a bit of numbness, their medications have been reduced and some of them been stopped. On 9th August, Man Sang Activity Centre in Taipei new course starting, two of them went to enrol immediately, make life better for them.

Learning "Longevityology" in the beginning, because if it's effectiveness, have to make time sitting quietly in the morning and evening, give people the impression that you are sitting and looking stupid, get laughed at by the people who do not believe Longevityology and think you have been cursed with voodoo planted by others. Just laying hands and able to change ills and pains, "cheating innocent boy", like the deceitful organisation. It does not matter if you do not believe; laugh or curse is up to you. Extending hands to help those who needed help, not accepting rewards, gain or fame, saving people with benevolence and compassion, even if cheated to charity, it is my entire willingness to do so, without regret in this life. Thankful to Mr. Zhiu senior's recommendation, even more thankful to teacher Lin, teacher Wei and chakras master and the entire senior learner's guidance, thank you to you all.

But up to now the only defect and disheartened response, its' my 89 years old father (strange old man), he knows he could feel the effectiveness of Longevityology, but not willing to have adjustments applied to him (has been unwell, had adjustments 5 to 6 times). So while he's sleeping, I would apply adjustments remotely, if woken up by the energy, he would ask me to leave. Really, no other way I could think of what to do?

Symptoms and adjustments : Echo hearing – C7 + C5 + ears.

High blood pressure – C7 + C4 + head + heart.

High uric acid – C7 + C3 + C2 .

Abnormal liver function – C3 + liver.

Knee joint pain – C7 + loin area + affected area.
