Because of brain tumour, been operated upon twice, bodily condition poor due to long-term use of medications, weighted 95 kg. High fat, high cholesterol, no strength in legs, struggling to walk, and daily living is painful.

After the advise from my aunt, and her own experience about the wonders of Longevityology, no need for medication, only with both hands, able to make her liver function from 100 and gone down to near normal. So why not try it! Enrolled with my wife together, accept Longevityology and completed the primary and intermediate courses.

Due to my unhealthy condition, and feeling rather low emotionally, almost getting to depressive state. It is quite odd, after completed the primary course, emotionally I am happier, because of feeling good, with the help of energy from Longevityology, there is significant improvement in the body, full of energy, and body weight is down to 85 kg. Whenever not doing anything, my hands would be on my knees, and I noticed that the hands been on my knees for half an hour, makes walking is a lot easier, it also increase the amount of my morning exercises.

Decided to complete the advance course with my wife, in order to improve our health condition, to change the black and white life into a colourful one.

Symptoms and adjustments : Brain tumour – C7 + the whole head.
