My spinal vertebrae is slightly curved and bald, otherwise no serious illness. My eldest son, when he was two months old started to have fits at intervals. Has gone through all the sophisticated testing/examinations, doctor said it is epilepsy; it is abnormal electrical discharge from the brain. When it first started approximately it happens once every two hours, lasting 5 to 10 minutes, in between there was also major and minor fits, had therapy and on medications, but there was not much improvement. The first time getting Longevity treatment from the volunteers, noticed obvious improvements, the number and the severity of fits have reduced a lot. After one-month treatment from the Longevity centre and Taipei centre, the epileptic fits stopped. Since he stopped fitting, his growth and all activities increased a lot, he continues to have treatment at the centre.

In fact, a few years ago I did learn Longevity, because I have not been practicing, without realizing it has been wasted. This time because of my son's illness, then I remember the long forgotten Longevity. For the sake of my son's condition, my wife and I again joined Longevity centre. Longevity is no doubt a special knowledge, when first look at it seems very simple, but the logic entails behind, is very deep. It is not only a kind of self help, help people "kung fu", also it is a kind of therapy that enables the body, heart and soul be healthy that link up with universal energy. Many thanks to all the enthusiastic volunteers treating my son, most grateful.

Symptoms and adjustments : Epilepsy – C7 + C6 + whole body.
